

IQAir purifier manufactures air purifiers for residential and commercial applications. IQAir residential models are available for a single room or an entire house.

The IQAir purifier can cleanse the air in an entire home by installing an IQAir central air cleaning system. IQAir whole-house purification systems utilize the ductwork already installed in an existing heating and/or cooling system. By using the installed ductwork to distribute purified air to every room in the house insures that the air in every room has clean purified air. The IQAir filtration system can be placed in a utility room, basement or attic making the installation invisible and non obtrusive in the home.

On the commercial side, IQAir manufactures both room and central air purification systems. The room air purifiers are configured to provide targeted air cleaning for exactly those air pollutants that are a problem in the commercial facility and work independently of any heating, ventilation or air conditioning (HVAC) equipment.

IQAir also manufactures a range of ducted air purification systems that are installed to cleanse the air circulated by a central HVAC systems. The commercial IQAir systems are designed to provide the highest level of air purification without adversely affecting the facility's airflow through the HVAC system.

Most people think that the most dangerous air for breathing occurs outside of one's home house. That belief is correct if you live in New York or Los Angeles. or some other smog plagued metropolitan area. However, for most people in the world the most dangerous air for pollutants exists in their home. However most indoor pollutants are far worse for breathing than outdoor pollutants. The Olympics were held recently and there was much concern about air pollution in the city of Beijing. IQAir purifiers were used by the US Olympic Committee to purify the air in the rooms of the US Team in Beijing.

Some of the most common allergens include pollens, molds, household dust mites, animal dander and insect droppings. All of these air pollutants are drastically reduced or eliminated totally by IQAir purifiers.

For over 40 years, IQAir has been at the leading edge of indoor air purification systems. IQAir is an international, Swiss-based industry leader in the field of hygiene air purification systems which are highly effective and yet very affordable.
